

Family Checklist for Nutrition in Early Care and Education

From *Preventing Obesity in Early Care and Education Programs*
Selected Standards from *Caring for Our Children: National Health and Safety Performance Standards*

Do you see the following practices carried out?

Infant Feeding

_____ Infants (babies less than 12 months of age) are fed only human milk or formula, never cow's milk.

_____ Infants are fed when hungry and are allowed to stop a feeding, when they show signs of fullness.

_____ Caregivers and teachers always hold infants for bottle-feeding of human milk or formula (the same formula that is used at home).

_____ Mothers are encouraged to breastfeed on-site, if possible, and breastfeeding families are welcomed.

_____ Infants are not fed solid foods in a bottle or infant feeder unless the feeding is written in the infant's care plan by the child's primary care provider.

_____ Infants are offered solid food no sooner than four months of age, and preferably around six months of age, as agreed upon with their families.

Specific Foods and Drinks

_____ Children (youngsters over 12 months of age) are served 100% full strength fruit juice in small amounts, 4-6 ounces; none is given to infants.

_____ Children are not served concentrated sweetened foods or drinks (e.g., candy, soft drinks, or fruit punch).

_____ Menus provide age-appropriate whole grains, vegetables, fruits, chicken, fish, and beans, and avoid salty and fried foods as well as trans and saturated fats.

_____ From the age of two, children are served skim or 1% pasteurized milk unless whole milk is written in the child's care plan by the child's primary care provider.

_____ Clean and sanitary drinking water is readily available throughout the day and children are encouraged to drink it.

Nutrition Plans and Policies

_____ Written menus and food guidelines are in place for the nutritional requirements of the children.

_____ Children are served age-appropriate portions that meet national requirements* for children in early care and education. *Child and Adult Care Food Program, US Department of Agriculture

_____ Toddlers and older infants are encouraged to feed themselves. Caregivers sit with them and supervise their use of child-sized cups, spoons, forks, and fingers.

Behavior and Socialization

_____ Mealtime is relaxed and enjoyable – a time when adults and children talk together and share conversation and learning opportunities with each other.

_____ Older children are involved in serving food as well as setting and cleaning tables.

_____ Children are not forced or bribed to eat (food is not used as a reward or a punishment) and eat only when seated.

Teaching opportunities for children 2 and over

Caregivers and teachers promote good nutrition by regularly including nutrition topics in the curriculum such as:

- Eating healthy foods,
- What foods have vitamins and what they do for us,
- How and where fruits and vegetables grow, and
- What is a food pyramid?

Please see: <http://teamnnutrition.usda.gov/Resources/TwoBiteClub.pdf>

How families can help caregivers and teachers promote good nutrition:

- Don't put your baby to bed with a bottle, even just water. It is a hard habit to unlearn and makes it more difficult for a caregiver who isn't giving your child a bottle in the crib.
- Serve nutritious foods at home; you can set an example and build good habits by eating healthy foods.
- Encourage young children to try new foods by being eager to taste and making mealtime fun. Plan meals and snacks, grocery shop, and cook with older kids.
- Ask your child's primary care provider if s/he would be willing to speak at a family meeting about the importance of healthy eating.
- To celebrate your child's special occasions, check with your child's caregiver or teacher about what is appropriate and appreciated - fresh whole fruit? Or non-food items like books, CDs, or a washable birthday cape and crown?
- Consider a slow cooker as a gift for a caregiver or teacher; it can reduce kitchen time for caregivers and teachers.
