Dental Sealant Clinic for Grade School Children

TWIN FALLS—A clinic to provide dental sealants and fluoride treatments for elementary school children will be held Saturday, April 16, at the College of Southern Idaho. The services are offered at a reduced fee, and students in grades two through six are eligible. The purpose of the clinic is to help improve oral health of young children and will cost \$5-20 per child, depending on the number of sealants applied. The clinic is sponsored by College of Southern Idaho, in partnership with Regence Caring Foundation for Children and South Central Public Health District. The clinic will run from 9 a.m. to 1 p.m. in the CSI's Health Science and Human Services building, located at 397 North College Road, room 187 (use east entrance by the ambulance).

Sealants are a simple and effective way to prevent the most common type of tooth decay in molar teeth. The chewing surfaces of molars have many deep pits and fissures (grooves) in which cavity-causing bacteria hide. These pits and fissures are hard to clean with a toothbrush. Sealants are plastic coatings that are painted on the teeth to seal the pits and fissures to help prevent tooth decay.

“Placing sealants is painless and easy for children,” explains Susie Beem, Dental Health Program Coordinator for South Central Public Health District. “The tooth is cleaned, conditioned, dried, and painted with the plastic sealant.”

Sealants protect the chewing surfaces of molars, but will not prevent decay between teeth, in the front teeth, or on tooth roots. Studies show that 84% of tooth decay in children occurs in the pits and fissures of permanent molars which are areas best protected by sealants. Without sealants, 75% of lower first permanent molars decay by age 13. While sealants do not completely protect children from tooth decay, they significantly reduce the chance of cavities.

To make an appointment for this clinic, call Andie Dayley at CSI at 732-6751.
