Director's Message

It is my privilege to share the Fiscal Year 2025 SCPHD Annual Report on behalf of our dedicated team at the Health District.

Every day, our staff demonstrate an extraordinary commitment to the health and well-being of the communities we serve. Their passion, expertise, and resilience ensure that we continue to fulfill our mission:

To prevent disease and disability, promote healthy lifestyles, and protect and prepare the public against emerging and ongoing health threats.

Logan Hudson, SCPHD District Director

This year, we strengthened essential public health services while advancing strategies that allow us to meet the evolving needs of our region. From providing critical clinical services and conducting disease surveillance, to engaging in prevention, education, and environmental health efforts, our work continues to be rooted in science, compassion, and collaboration.

We do all of this with a steadfast focus on responsible stewardship of public resources. By prioritizing efficiency, leveraging partnerships, and exploring new funding opportunities, we ensure that every dollar we invest contributes directly to healthier outcomes for individuals, families, and communities.

I am grateful to our Board of Health, community partners, stakeholders, and community members whose trust and collaboration make our progress possible. Together, we are building a healthier future that is sustainable and prepared for the challenges that lie ahead.

Thank you for your continued support of public health.

Sincerely,

Logan Hudson
SCPHD District Director

Mission and Admin

Our Mission:

To **PREVENT** disease and disability

To **PROMOTE** healthy lifestyles

To **PROTECT** and **PREPARE** the public against health threats

Environmental Health

Inspections, Investigations, and Permits

South Central Public Health District's Environmental Health Division is consistently working to ensure the safety of our region through a variety of inspection, investigation, and permitting services.

Some of these services include, but are not limited to: restaurant inspections, mobile food establishment permitting, public water system inspections, and septic permits.

2025 EH ACTIVITIES BY COUNTY

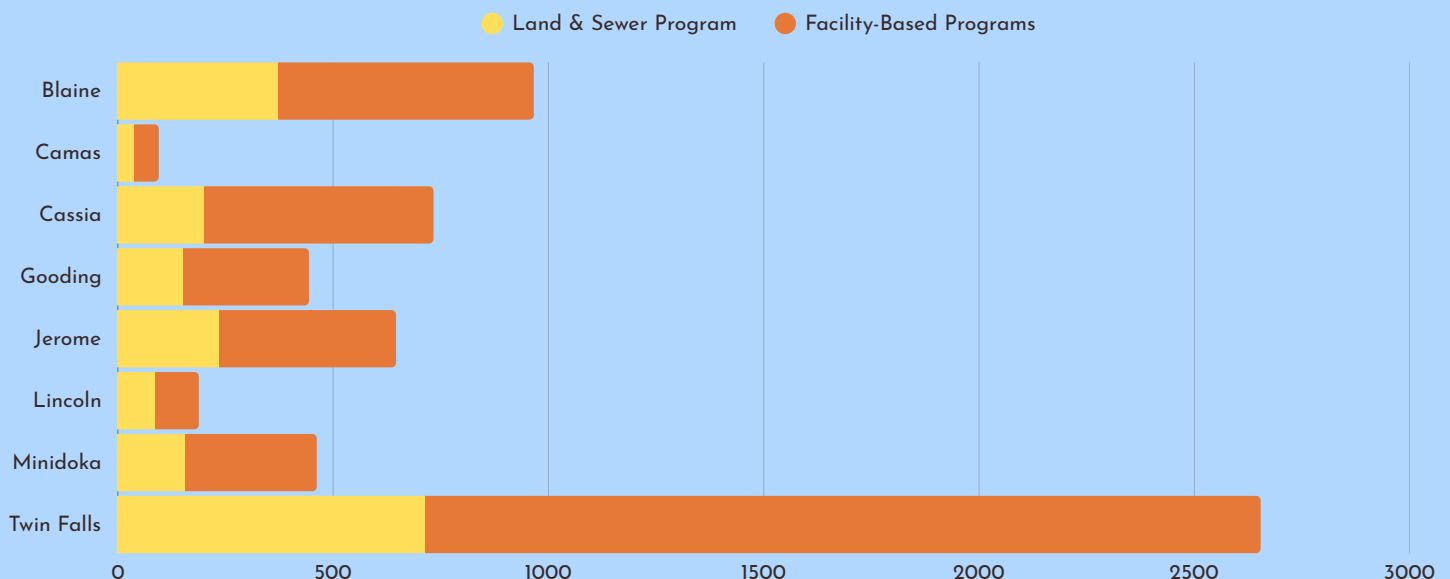

Land-based programs
(inspections, permits, etc.):

- Septic
- Land Development
- Solid Waste Control
- Nuisance Complaints
- Ambient Air Quality (Outdoor Air)
- Private Water (Domestic Wells)

Facility-based programs
(inspections, permits, etc.):

- Daycares/Preschools
- Food Protection
- Public Swimming Pools
- Public Drinking Water Systems (PWS)
- Recreational Water Quality
- Indoor Air Quality (IAQ)
- Vector Control

TOTAL ACTIVITIES: 6,188

Community Health

Advocating for a Healthier Idaho

What is Community Health?

Community health is a cornerstone of modern public health because it focuses on the well-being of whole populations.

By focusing on prevention—like healthy eating, exercise, and screenings—we can avoid costly diseases and improve overall well-being in our communities. Rooted in historical data, the field of community health centers around addressing health issues in the community for long-term improvements.

SCPHD oversees several community health and education programs to benefit the residents of our health district.

Here are some of the highlights.

Community Outreach

In the last year, the SCPHD Outreach Specialist attended over 25 community events and fostered relationships with other agencies throughout the region to educate the public about community health.

SCPHD services and programs were promoted at these events, which took place in all eight counties.

Examples of services and programs that are promoted at these events vary depending on the nature of the event, but the most popular are WIC, Parents as Teachers, immunizations, mental health awareness, vaping and drug prevention, and food safety.

WIC

Founded over 50 years ago, WIC is a special nutrition program that is designed to help women, infants, and children who have special medical or nutritional needs.

South Central Public Health District oversees the local administration of the WIC program for our eight county region.

SCPHD staff at an outreach event

This year, WIC served over 5400 clients at offices in Twin Falls, Jerome, Gooding, Shoshone, Bellevue, and Heyburn.

Car Seat Education & Installation

In the last year, SCPHD has provided car seats to 200 WIC clients in the district.

The health district was awarded two grants (Twin Falls County Health Initiative Trust and First Federal Foundation) to purchase car seats for events held at SCPHD offices in Bellevue, Gooding, Jerome, Heyburn, and Twin Falls.

In addition to receiving a low-cost car seat, clients also receive valuable education on how to properly install and use a car seat.

Idaho's rate of car seat misuse is 68%. Properly using car seats decreases the risk of fatal injury by 54%-71%. The Children's Safety Network has identified that using a car seat for children age 0-4 yields an estimated cost savings of \$2855 per seat to society. Using that figure, this program has saved society \$571,000.

Catch My Breath

The CATCH My Breath Program is an evidence-based youth vaping prevention program that teaches about the adverse effects of vaping, strategies in handling peer pressure, marketing tactics of vape companies, and how to make educated decisions and goals to achieve a healthier lifestyle.

Results from the curriculum demonstrate a 34% increase in knowledge regarding advertising goals of vape companies and a 67% increase in knowledge about the legal age and policy behind tobacco use.

Fit and Fall Proof

The Fit and Fall Proof Program is an exercise-based prevention program for older adults. SCPHD teaches Fit and Fall Proof classes at several locations across the district.

Fit and Fall Proof, cont.

The program is designed to strengthen health in seniors both cognitively and physically. **The inclusivity from the modifiable exercises has allowed a 20.18% increase in participation within the Fit and Fall Proof Program in the past year.**

There is a participant return rate of 88.3% and new attendee rate of 11.7%.

7 in 10 participants report physical improvements and daily task performance, while 3 in 4 participants report an energy increase and improved mental health.

Drug Take Back Day

South Central Public Health District coordinates Drug Take Back Days at several locations across the health district every April and October, providing community members with a safe and convenient way to dispose of unused medications.

In 2024, Idaho received more than 13,000 poison control calls related to medications, highlighting the importance of these events in protecting community health and safety.

During the October 2024 and April 2025 Drug Take Back Day events, a combined total of approximately 775 pounds of unused medications were collected.

SCPHD staff at DTB Day

Family & Children's Health

Disease Prevention, Epidemiology, and Care

SCPHD's Family and Children's Health (FACH) Division has a wide variety of programs that serve the public, including immunizations, epidemiology, school nursing, tuberculosis treatment, Women's Health Check, Parents as Teachers (PAT), and Early Head Start nurse home visiting.

Here are some of the highlights.

Parents as Teachers (PAT)

- Parents as Teachers is an evidence-based program that serves families from prenatal through kindergarten with personalized in-home visits focused on child development, parenting, and family well-being.
- 108 families served, with slightly over 1,000 visits completed last year.
- Families often stay engaged with their parent educator for more than 2 years, forming deep, trusting relationships.
- Helps parents navigate challenges such as depression, intimate partner violence, and special needs, while connecting them to critical community resources.
- Provides regular developmental screenings and early detection of delays, improving access to early intervention protocols.
- Children in PAT programs are more likely to be school-ready, perform better in early grades, and require fewer remedial services.
- PAT participation is linked to a 22% reduction in substantiated child maltreatment—keeping children safer and reducing system costs.
- Parents show higher confidence, improved parenting practices, and better mental health.
- Families in PAT report greater home safety, increased literacy activities, and stronger relationships.
- Every \$1 invested in early childhood programs like PAT returns \$2-\$5+ in long-term public savings (education, health care, child welfare, and more).

"I love how open and welcoming everyone is. All the staff are always willing to help or find ways to help and it is so nice and refreshing."

– Quote from a member of a PAT Family

Immunizations

In the last year, SCPHD administered 12,504 immunizations to 5,976 people.

This is made possible in part by hosting mobile immunization clinics across the district at schools, businesses, senior centers, and community events. By meeting people where they are, SCPHD ensures that underserved and remote communities have access to vaccines, increasing vaccination rates and promoting healthcare so that members of our community, regardless of circumstances, can benefit from the protection immunizations provide.

School Health

The SCPHD school nurses work with school districts all over our region to help keep children healthy.

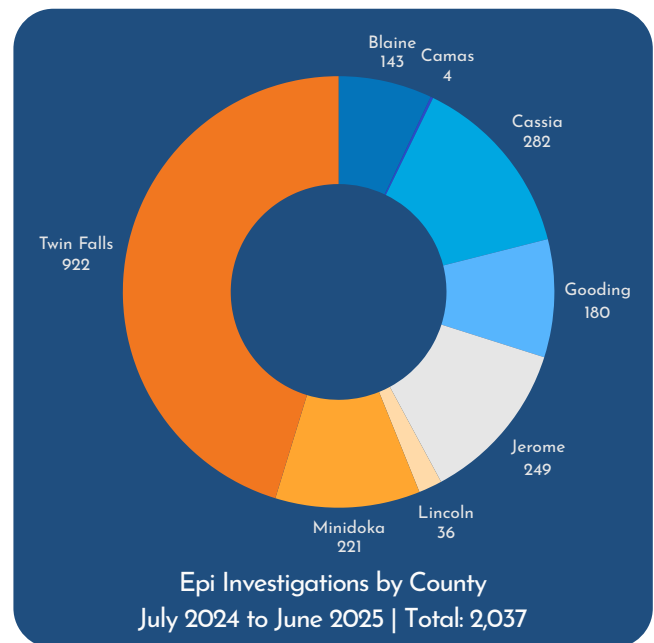

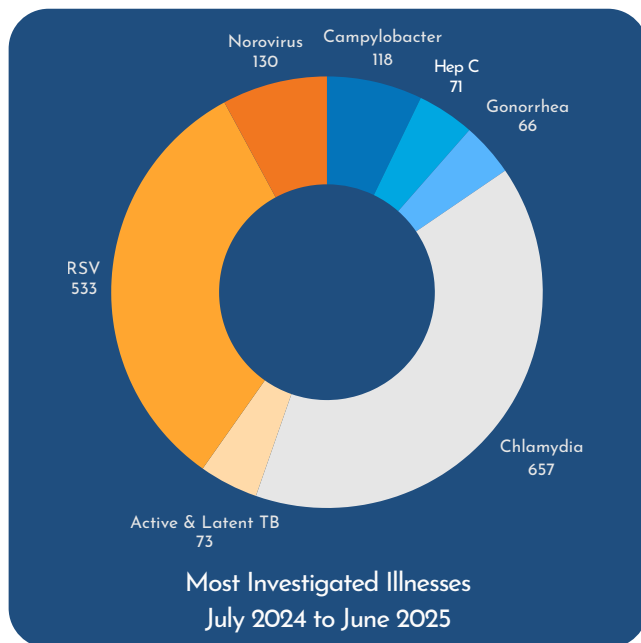

School districts covered by SCPHD:

- Wendell
- Richfield
- Dietrich
- Heritage Academy
- Twin Falls
- Richfield
- Shoshone
- Hansen
- Hagerman
- (as consultants)

Epidemiology

An epidemiologic investigation of an illness outbreak involves rapidly identifying and defining cases, collecting clinical and exposure information, and coordinating laboratory testing to confirm causative pathogens.

The epidemiologist analyzes data by person, place, and time to understand how the illness is spreading, while also assessing infection prevention practices and environmental factors. Based on findings, control measures are recommended to limit transmission of the illness. Throughout the investigation, our epidemiology program works closely with facility leadership and healthcare providers to guide interventions and monitor their effectiveness until the outbreak is over.
